## Sensorist Nominated by Nordic Startup Award for "Best IoT Startup" in Denmark

Sensorist are proud to to be selected by Nordic Startup Award for a nomination for "Best IoT Startup" in Denmark. The selection are based on the following criteria:

**"Startup that has shown the greatest development based on a technology that focuses on the interaction between IT, data and society"**

"Just being nominated is great achievement" says founder and CEO Kasper Mejlgaard and continues "We already receive a lot of amazing feedback from our customers, but still It's really great to get the recognition from the Danish Startup eco-system"

The Nordic Startup Awards is a unique series of events in the Nordic countries – Denmark, Sweden, Iceland, Norway and Finland – to recognize, celebrate and connect the Nordic startup ecosystem. In addition to being regional it is also cross-sectorial, bringing together all the actors within the startup ecosystem from startups and investors, to journalists and many more.

The Danish National Finale is hosted by Welovestartups in "Industriens Hus" on the 3rd of May 2016.

### Sensorist in short:

Sensorist designs and produce a range of small, battery operated, extendable wireless sensors that measure temperature and humidity that can be extended with a number of connectable probes such as CO<sub>2</sub> ppm, door contacts, water/flood detectors and other external temperatures-probes (PT100/PT1000).

Measurements are collected 24/7 online and can be accessed forever. Unlike traditional thermometers, we offer data visualizations, trends, full history and custom alarms - on our website, App or integrated in any solution through our REST API. The hardware are also widely deployed as OEM solutions without custom branding for use in larger integrated solutions by our customers.

We have sold more than 10.000 Sensorist units in more than 40 countries all over the world and we are currently hosting more than 340 million measurements in our Cloud infrastructure.
